In order to satisfy the requirement under 37 C.F.R. §1.98(a)(3) for a concise explanation of the relevance of each item of information, applicant herewith notes with respect to any information that is not in English language as follows:

Reference A) describes a printed circuit board connector element having a plurality of signal contacts (2) arranged grid-like in a spring clip (1) and a shielding unit (3) that contains a first and second ground lamina (4, 5) that are conductively connected via a bridge (6) that have a first impressible ground terminal (7) projecting from it. The ground laminae (4, 5) respectively extend over all intervening signal contacts (2) of a column, whereby a shielding unit is provided for only every second signal contact column. As a result thereof, only one signal contact per two columns need be occupied with ground or, respectively, only one shielding unit per two columns is required for the complete shielding of all columns.

The above-identified application discloses and claims an invention patentable over this prior art. Entry of the references above set forth into the file of the above application is believed to be in order and is respectfully requested.

Respectfully submitted
